

## EMIR Archive System

The new way to a faster EMIR system!

Many of you have been EMIR customers for many years, and over that time you have relied upon EMIR for detailed information about every job you have processed. So hundreds and perhaps thousands of jobs have been processed, each with many labour, spares, purchases, notes and other information stored against them.

Well, all of this information, growing exponentially on a daily basis, will undoubtedly mean that your system takes up more storage than it used to and consequently takes longer to run, particularly when compiling reports or enquiries that require a 'trawl' through the data to locate the information required.

Now, while we pride ourselves on trying to write EMIR as efficiently as possible, there is no getting away from the fact that more data means more storage, larger files and inevitably a decrease in performance across the speed of the system. Obviously your older data is less important than the ongoing [or last year's] information, but you can gain so much from revisiting old jobs [what you did, pricing, etc.] that you don't want to lose this information, but at the same time wouldn't you like the system to be leaner and faster to run and report?

Well, now you can have the best of both worlds via the EMIR Archive System. The EMIR Archive system is a new copy of EMIR that will contain your older jobs, PO's and all other transactions complete with all the relevant information

pertaining to them. A new utility will sort through your EMIR data and remove all data older than the date you provide.

The Archive system will contain the old data, whilst your current EMIR system will keep all the latest data plus anything that is outstanding from before the cut-off date [if anything]. The Archive system will not allow users to add data, but will allow enquiries, searches and reporting on all data contained within it, as your current EMIR system does now, so nothing will be lost and all information will still be quickly available.

### EMIR Archive System Key Points

- Safely transfers your old data from your current system to a new and separate Archive system.
- Speeds up your main system as it only contains your current data for all reports and enquiries.
- Your older data is still instantly available for enquiries and reporting in your Archive copy of EMIR.
- This is a repeatable process, so can be done yearly, or as often as required.

“ Our EMIR data is so precious to us; our customers know that we can give them a complete breakdown of history for any location or equipment when they need it. We've actually used EMIR for over twenty years and our whole trading life is stored in its files. With 2 years of live trading at hand and the remaining data in the EMIR Archive Utility, this has greatly improved the EMIR live system access times, a point our employees greatly appreciate. ”
